

AAT has initiated and delivered many local energy projects in the community.

Awel Aman Tawe was founded in 1998 with the purpose of addressing climate change at a local level by developing community renewable energy schemes. Since then, we have initiated and delivered many local projects, and we have supported projects developed by other communities.

A few of our projects:

-

solar hot water panels installed on community centres and private houses

-

two small scale PV and wind turbine projects established

-

one of the largest school roof photovoltaic panels at the time installed

-

Archived Projects

Last Updated Tuesday, 27 October 2015 15:07

a District heating scheme developed to provide heating for a number of houses from a wood pellet boiler

-

EDUcan energy unit built to attend schools and community events to tell people about energy conservation and sustainable living

-

hundreds of householders advised about home energy efficiency
